ART UNIT

PAPER NUMBER

2178

DATE MAILED: 06/28/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/777,352

Applicant(s)

DENOUE ET AL.

Examiner

Cong-Lac Huynh

Art Unit

2178

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 February 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-61 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-61 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to communications: the application filed on 2/12/04.
2. Claims 1-61 are pending in the case. Claims 1, 20, and 41 are independent claims.

Claim Objections

3. Claim 15 is objected to because of the minor error: the word "and" within "the selecting, moving, **and** deleting step comprises" (line 2) is not correct. It should be "or" to be suitable in the phrase.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

5. Claims 1-2, 4-13, 16-21, 23-34, 37-42, 44-47, 49-54, 56-61 are rejected under 35 U.S.C. 102(a) as being anticipated by Marshall et al. (US Pat App Pub No 2003/0070139, filed 9/16/02, priority 9/14/01).

Regarding independent claim 1, Marshall discloses:

- reading and displaying a portion of a digital document on a screen based on one or more display properties of the screen (figures 3-4, [0037], [0038], [0028], [0082]: displaying a portion of a digital document can be carried out on a

Art Unit: 2178

- personal computer with normal size display or on a handheld device implies the document is read to be displayed based on one or more properties of the screen)
- accepting one or more freeform annotations on the displayed portion of the digital document via one or more input devices (figures 2-4, [0035], [0056])
 - processing the one or more freeform annotations via a completely deterministic state machine ([0079])

Regarding claim 2, which is dependent on claim 1, Marshall discloses that the method can be performed on one or more computing devices, wherein a computing device in the one or more computing devices can be one of: a PDA, a Tablet PC, a Pocket PC, a cell phone, an electronic message device, a Java-enabled device, a laptop or desktop PC, a workstation, and a mainframe computer ([0082]).

Regarding claim 4, which is dependent on claim 1, Marshall discloses that the digital document can include at least one of: a text file, an image, a figure, a drawing, a graph, a picture, and a video clip ([0037]).

Regarding claim 5, which is dependent on claim 1, Marshall discloses wherein a display properties in the one or more display properties of the screen can be associated with one of: a text font, a font size, a text color, a display width, height, and resolution of the screen ([0041]: the font characteristics are ones of the display properties).

Regarding claim 6, which is dependent on claim 1, Marshall discloses wherein a freeform annotation in the one or more freeform annotations can be one or more of strokes, gestures and handwritings of any shape ([0047], [0048]).

Regarding claim 7, which is dependent on claim 1, Marshall discloses wherein an input device in the one or more input devices can be one of a keyboard, a mouse, and a stylus ([0049], [0056]).

Regarding claim 8, which is dependent on claim 1, Marshall discloses storing the digital document in memory and/or in a persistent storage ([0057]).

Regarding claim 9, which is dependent on claim 1, Marshall discloses wherein the reading and displaying step comprises at least one of utilizing the control of the Microsoft Internet Explorer and accessing the Document Object Model to obtain the bounding box of the digital document ([0056]: the system for performing freeform annotations on documents using a connection over the Internet or intranet implies utilizing the control of a Internet browser such as Internet Explorer).

Regarding claim 10, which is dependent on claim 1, Marshall discloses reserving an area on the screen for the input of the one or more freeform annotations ([0040]).

Art Unit: 2178

Regarding claim 11, which is dependent on claim 1, Marshall discloses managing one or more annotation marks on the displayed portion of the digital document by performing at least one of: creating, selecting, modifying, moving, deleting, rendering, and displaying an annotation mark of the one or more annotation marks on the screen based on the one or more display properties of the screen ([0047]: writing marks with pen strokes shows creating annotation marks with a pen).

Regarding claim 12, which is dependent on claim 11, Marshall discloses the annotation mark in the one or more annotation marks can be *one of*:

- an anchor capable of associating with a part of the portion of the digital document [0035]-[0036]: the circle, underline, and asterik, which are annotation marks, associated with a portion of a document to indicate that the importance of the portion, [0037]-[0038])
- a link capable of connecting at least two anchors
- a comment capable of associating with either an anchor or a connector

Regarding claim 13, which is dependent on claim 12, Marshall discloses that:

- the anchor can be one of: an underline, a highlight, a circled word, a circled area, a bracket, and a margin bar ([0036], [0038]-[0039])
- the link can be one of: an arrow, and a connector ([0037], [0040])

Regarding claim 16, which is dependent on claim 11, Marshall discloses that the rendering step comprises at least *one of*:

- retrieving a bounding box of the annotation mark ([0053])
- resizing and/or splitting the annotation mark
- repositioning the annotation mark on the portion of the digital document under display

Regarding claim 17, which is dependent on claim 12, Marshall discloses:

- reserving an area on the screen for the rendering of the comment ([0040]: writing marginalia implies that margin is reserved as an area to render a comment); and/or
- resizing and/or repositioning the comment based on one of the one or more display properties

Regarding claim 18, which is dependent on claim 12, Marshall discloses identifying the start of the comment by recognizing a freeform annotation in the one or more freeform annotations ([0040], [0042], wherein the freeform annotation is capable of starting on a blank area on the digital document under display ([0040]: the mark should be written on a blank area); and/or not intersecting with any word or image on the digital document.

Regarding claim 19, which is dependent on claim 12, Marshall discloses:

- identifying the finish of the comment by recognizing a freeform annotation in the one or more freeform annotations [0040], [0047] wherein the freeform annotation can be one of:
 - o a click on a predefined area on the screen, which can be a button
 - o a circular gesture around the comment ([0047], [0053]: clustering of marks with encompassing boxes shows a circular gesture around the comment)
 - o s strike-through gesture on the comment

Claims 20-21, 23-34, 37-40 are the system of method claims 1-2, 4-13, 16-19, and are rejected under the same rationale.

Claims 41-42, 44-47, 49-54, 56-61 are the system of method claims 1-2, 4-13, 16-19, and are rejected under the same rationale.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 3, 14, 15, 22, 35-36, 43, 48, and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marshall et al. (US Pat App Pub No 2003/0070139, filed 9/16/02, priority 9/14/01).

Art Unit: 2178

Regarding claim 3, which is dependent on claim 1, Marshall does not explicitly disclose that the method can be implemented in one or more of the following programming languages: C, C++, Visual Basic, Java and Java Applet.

However, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to have modified Marshall to incorporate using one or more of programming languages C, C++, Visual Basic, Java and Java Applet to implement the method since these are well known programming languages to write a program.

Regarding claim 14, which is dependent on claim 1, Marshall does not explicitly disclose storing the one or more annotation marks in memory and/or in a persistent storage.

However, Marshall discloses detecting different types of annotation marks applied on a document ([0040]). This suggests that the annotation marks are stored in memory.

Regarding claim 15, which is dependent on claim 11, Marshall does not explicitly disclose that the selecting, moving, modifying, or deleting step comprises: tapping, holding, and lifting an input device in the one or more input devices on the annotation mark.

However, Marshall does disclose creating annotation mark with pen strokes ([0047]).

Therefore, it would have been obvious to an ordinary skill in the art at the time of the invention was made to modify Marshall to incorporate tapping, holding, and lifting an input device on the annotation mark since said tapping, holding, and lifting are “must do” actions when writing strokes on a document.

Art Unit: 2178

Claims 22, 35-36 are the system of method claims 3, 14-15, and are rejected under the same rationale.

Claims 43, 48, and 55 are the system of method claims 3, 14-15, and are rejected under the same rationale.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Altman et al. (US Pat No. 7,028,256, filed 5/10/02).

Fuoss et al. (US Pat No. 7,003,308, priority 9/12/00).

Price et al. (US Pat No. 6,766,494, filed 6/15/98).

Golovchinsky et al. (US Pat No. 6,389,435, filed 2/5/99).

Schilit et al. (US Pat No. 6,279,014, filed 9/15/97).

Kuruoglu et al. (US Pat App Pub No. 2002/0078088, filed 12/19/00).

Kuruoglu et al. (US Pat App Pub No. 2004/0034835, filed 10/19/01).

Marshall et al. (US Pat App Pub No. 2004/0194021, filed 9/14/01).

Euchner et al. (US Pat App Pub No. 2005/0138541, filed 12/23/00).

Barsness et al. (US Pat App Pub No. 2004/0201633, filed 9/13/01).
